Cost Shift

A hospital incurs costs to provide services to their patients. All patients, regardless of their ability to pay, are billed the same price for the same service. Sometimes the payment received by the hospital is less than cost for the services provided. This includes payments from uninsured, Medicare, and Medicaid patients. When the payment doesn't cover the cost to provide those services, this unreimbursed cost is passed on to other payers; this is the "cost shift". The ability to cost shift helps the hospital maintain its financial health.

FTEs per adjusted occupied bed measures the cost effectiveness of the organization related to the total labor costs required to provide services to patients on a daily basis.

Brattleboro Retreat's cost per adjusted admission is higher than a general hospital due to the longer lengths of stay of the patients that are treated. For an acute inpatient psychiatric admission the length of stay is 10 days, which is double the length of stay of most general hospital patients. Psychiatric residential

Capital expenditures in a psychiatric hospital relate primarily to the physical plant and equipment expenditures relate more to the patients' physical surroundings. Investment in expensive technological diagnostic equipment for general medical services does not occur in a psychiatric facility as it would in a general medical hospital.
